

# MOHAMED MUSNI

## DevOps & Cloud Engineer

+94 756371472 · [musnymohammed@gmail.com](mailto:musnymohammed@gmail.com) · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

---

### PROFESSIONAL SUMMARY

DevOps Engineer with hands-on production experience in Kubernetes, Terraform, ArgoCD, and GitLab CI/CD — currently maintaining multi-cluster infrastructure and mobile release pipelines (iOS/Android) as a Junior DevOps Engineer at Hashnate. Background in Linux system administration, Docker containerization, and cloud deployment across Microsoft Azure and Oracle Cloud Infrastructure, with additional experience in monitoring (Prometheus/Grafana) and backend engineering (FastAPI, Node.js). Comfortable operating in high-availability, multi-cluster environments and automating deployment workflows end-to-end.

---

### WORK EXPERIENCE

#### Hashnate — Junior DevOps Engineer

*Jul 2026 – Present*

- Maintain and operate multiple production Kubernetes clusters, managing workload deployments via ArgoCD (GitOps) alongside senior engineers.
- Develop and enhance GitLab CI/CD pipelines spanning backend, frontend, and Terraform-based Infrastructure-as-Code repositories.
- Own end-to-end mobile release automation: CI/CD pipelines that build and upload iOS builds to TestFlight and Android builds to Google Play Console on every push.
- Author and maintain Terraform modules for infrastructure provisioning across environments.
- Collaborate with development teams to automate release processes and reduce manual deployment overhead.
- Diagnose and resolve infrastructure, pipeline, and deployment issues across staging and production.

*Previously: DevOps Intern*

*Jan 2026 – Jul 2026*

- Assisted in maintaining Kubernetes clusters and supported ArgoCD-based deployment workflows under senior engineer guidance.
- Contributed to GitLab CI/CD pipeline development for backend and Terraform-based IaC projects.
- Gained hands-on exposure to high-availability, multi-cluster infrastructure operations.

---

### ADDITIONAL DEVOPS PROJECTS

#### POS System — Production Deployment [Source](#) | [Demo](#) *Microsoft Azure*

- Deployed and maintained a production web-based POS application on Microsoft Azure VMs; configured Linux server environments and networking.
- Containerized backend services with Docker for consistent, repeatable deployments; managed SSH-based access and secure environment configuration.
- Diagnosed and resolved deployment and runtime issues in live environments.

#### n8n Automation Platform — Deployment, Automation & Monitoring *Oracle Cloud Infrastructure*

- Deployed and maintained self-hosted n8n on Oracle Cloud Infrastructure Linux VMs, containerized with Docker.
- Configured Prometheus for metrics collection; built Grafana dashboards for CPU, memory, service health, and uptime.
- Administered Linux server (systemd, updates, SSH); automated operational workflows integrating external APIs.

---

## TECHNICAL SKILLS

|                                       |                                                                                                       |
|---------------------------------------|-------------------------------------------------------------------------------------------------------|
| <b>Cloud &amp; Infra</b>              | Microsoft Azure (VM deployment), Oracle Cloud Infrastructure, Linux/Ubuntu server administration, SSH |
| <b>Containers &amp; Orchestration</b> | Docker, Kubernetes, ArgoCD (GitOps)                                                                   |
| <b>CI/CD &amp; IaC</b>                | GitLab CI/CD, Terraform, GitHub Actions, mobile release automation (TestFlight, Google Play Console)  |
| <b>Monitoring</b>                     | Prometheus (metrics collection), Grafana (dashboards), infrastructure health & resource monitoring    |
| <b>Automation</b>                     | n8n workflow automation, Python scripting, Bash                                                       |
| <b>Backend</b>                        | FastAPI, Node.js / Express.js, RESTful API design                                                     |
| <b>Databases</b>                      | PostgreSQL, MongoDB, MySQL                                                                            |
| <b>Frontend</b>                       | React.js, JavaScript, Tailwind CSS, Bootstrap                                                         |
